

Notes

1. This map shows the predicted likelihood of surface water flooding based on the updated Flood Map for Surface Water (uFMSW) data, which may be subject to further analysis in the future. Further information on the mapping is provided on the Environment Agency website: www.gov.uk/government/organisations/environment-agency.
2. The Flood Risk from Surface Water mapping is split into the following categories:
 - High - each year, the chance of flooding is greater than 1 in 30 (3.3%).
 - Medium - each year, the chance of flooding is between 1 in 100 (1%) and 1 in 30 (3.3%).
 - Low - each year, the chance of flooding is between 1 in 1000 (0.1%) and 1 in 100 (1%).
 - Very Low - each year, the chance of flooding is less than 1 in 1000 (0.1%).
3. The potential impact of surface water flooding can vary according to the depth of the water, and its velocity (speed and direction that it is flowing in).
4. Surface water flooding happens when rainwater does not drain away through the normal drainage systems or soak into the ground, but lies on or flows over the ground instead. This type of flooding can be difficult to predict as it is hard to forecast exactly where or how much rain will fall in any storm.

Intended Use

This map is intended to provide a strategic overview of surface water flood risk and should not be used to assess flood risk for individual properties or infrastructure.

LEGEND	
Nottinghamshire County Council Administrative Boundary	
Risk of Surface Water Flooding	Agricultural Land
